LED DIODY

VYSOCE SVÍTIVÉ LED DIODY PRO MALÉ NAPĚTÍ High Luminous Intensity LED Lamps

LED

LED diody se svými vlastnostmi značně odlišují od žárovek. Vyznačují se především svojí dlouhou životností, odolností vůči otřesům a vibracím, jejich barvy jsou stálé, a mají velice nízkou spotřebu elektrické energie. Jejich nízká povrchová teplota zabraňuje poškození termálním šokem při styku s vodou při provozu. Jejich použití je obdobné, jako je tomu u běžných vláknových žárovek. Proto se zpravidla LED diody osazují běžnými žárovkovými paticemi.

LED diodes differ radically from general purpose lamps. They are characterized by long life span, shock and vibratio-proof. LED diodes come with stable colours and with very low energy consumption. Their low surface temperature protects them against thermal shocks within contact with water during operating. Use of LED diodes is similar to common filament lamps. Easy replacement, that is the reason why LED diodes are very often available with common lamp bases
